Introduction

This summary supersedes the recently issued preliminary report on Pacific Coast canned fruit prices and shipments.^{1/} The earlier report included estimated preliminary data on canners' shipments for 1964-65 and was issued to provide the industries with the latest available information. This report includes, and is based on, final and complete data on f.o.b. prices and movements of the various fruits. Where final or complete data are not available (exports), estimates are provided and used in this report. The results and data presented here are issued to provide the industry and governmental and private marketing organizations with materials used in the discussion and formulation of marketing policies, plans, and programs.

The report first presents summary highlights on the industry average f.o.b. price experience and on the f.o.b. shipments by canners during 1964-65. Then are summarized economic-statistical relationships of the average f.o.b. prices to major market influences for canned cling peaches, pears, freestone peaches, and apricots. Sources of the data and their characteristics are noted before the industry statistics are given in tables which incorporate the basic data and the results of the f.o.b. price analyses.

^{1/} Sidney Hoos, Preliminary Report--Pacific Coast Canned Fruits, F.O.B. Price Relationships, 1964-65 (Berkeley: California Agricultural Experiment Station, June 7, 1965), 34p.

F.O.B. Prices and Movement, 1964-65

The f.o.b. prices which reflect the average industry experience during the 1964-65 marketing year are summarized as follows:

Canned fruit	1964-65 average f.o.b. prices dollars per case; 24 No. 2½ basis
California cling peaches (choice, No. 2½)	4.51
California apricots (choice, No. 2½)	5.26
Pacific Coast pears (choice, No. 2½)	6.29
Pacific Coast Elberta freestone peaches (fancy, No. 2½)	5.68
California fruit cocktail (choice, No. 2½)	5.78
Hawaiian pineapple (fancy, sliced, No. 2½, f.o.b. San Francisco)	8.50

The estimated movement of canned fruit from canners during 1964-65 is given in detail in the appended tables. But the following table presents the indicated summary results.

Canned fruit	1964-65 movement from canners		
	Total	Commercial	Domestic commercial
	thousands of cases; 24 No. 2½ basis		
California cling peaches	28,007	27,300	22,050
California apricots	4,500	3,960	3,810
Pacific Coast pears	8,611	8,399	8,249
Pacific Coast freestone peaches	5,132	4,863	4,863
California fruit cocktail	15,876	15,614	12,114

Also, it is estimated that some 13,400,000 cases (24 No. 2½ basis) of pineapple moved into trade channels through packers' and importers' shipments for domestic civilian consumption.

F.O.B. Price Relationships

In addition to providing the basic marketing information summarized above and in the attached tables, this report presents the results of statistical analyses of the major factors which are related to the industry average f.o.b. prices of canned cling peaches, pears, apricots, and freestone peaches. The major price-affecting factors include the commercial movement from canneries, the level of national disposable personal income, and the relative level of prices of canned fruits competing with the respective canned fruits. Those price-influencing factors are shown in tables appended to this report. The f.o.b. price relationships may be summarized as follows:

Canned Cling Peaches

A change of 10 percent in the total commercial or domestic commercial movement (24 No. 2½ basis) of California canned cling peaches, considered by itself, was on the average accompanied by a change in the opposite direction of about 3 percent in the f.o.b. price (choice, No. 2½) of canned cling peaches.

An increase of 10 percent in the index of disposable income, considered by itself, was on the average accompanied by an increase of about 12 percent in the f.o.b. price (choice, No. 2½) of canned cling peaches.

A change of 10 percent in the adjusted index of prices of competing canned fruits, considered by itself, was on the average accompanied by a change in the same direction of about 11 percent in the f.o.b. price (choice, No. 2½) of canned cling peaches.

Differences between the actual f.o.b. prices of canned cling peaches (choice, No. 2½) and those accounted for by the statistical analysis are given in Table 5 of this report.

Canned Pears

A change of 10 percent in the commercial domestic movement (24 No. $2\frac{1}{2}$ basis) of Pacific Coast canned pears, considered by itself, was on the average accompanied by a change in the opposite direction of about 3 percent a case in the f.o.b. price (choice, No. $2\frac{1}{2}$) of Pacific Coast canned pears.

An increase of 10 percent in the index of disposable income, considered by itself, was on the average accompanied by an increase of about 13 percent a case in the f.o.b. price (choice, No. $2\frac{1}{2}$) of Pacific Coast canned pears.

A change of 10 percent in the adjusted index of prices of competing canned fruits, considered by itself, was on the average accompanied by a change in the same direction of about 11 percent a case in the f.o.b. price (choice, No. $2\frac{1}{2}$) of Pacific Coast canned pears.

Differences between the actual f.o.b. prices of Pacific Coast canned pears (choice, No. $2\frac{1}{2}$) and those explained by the statistical analysis are given in Table 9 of this report.

Canned Apricots

A change of 10 percent in the commercial domestic movement (24 No. $2\frac{1}{2}$ basis) of California canned apricots, considered by itself, was on the average accompanied by a change in the opposite direction of about 3 percent in the f.o.b. price (choice, No. $2\frac{1}{2}$) of canned apricots.

A change of 10 percent in the index of disposable income, considered by itself, was on the average accompanied by a change in the same direction of about 8 percent in the f.o.b. price (choice, No. $2\frac{1}{2}$) of canned apricots.

A change of 10 percent in the adjusted index of prices of competing canned fruits, considered by itself, was on the average accompanied by a change in the same direction of about 7 percent in the f.o.b. price (choice, No. $2\frac{1}{2}$) of canned apricots.

Differences between the actual f.o.b. prices of canned apricots (choice, No. $2\frac{1}{2}$) and those explained by the statistical analysis are given in Table 13 of this report.

Canned Freestone Peaches

A change of 10 percent in the commercial domestic movement (24 No. $2\frac{1}{2}$ basis) of Pacific Coast canned freestone peaches, considered by itself, was on the average accompanied by a change in the opposite direction of about 1 percent a case in the f.o.b. price (fancy, No. $2\frac{1}{2}$) of Pacific Coast canned freestone peaches.

An increase of 10 percent in the index of disposable income, considered by itself, was on the average accompanied by an increase of about 12 percent a case in the f.o.b. price (fancy, No. $2\frac{1}{2}$) of Pacific Coast canned freestone peaches.

A change of 10 percent in the adjusted index of prices of competing canned fruits, considered by itself, was on the average accompanied by a change in the same direction of about 14 percent a case in the f.o.b. price (fancy, No. $2\frac{1}{2}$) of Pacific Coast canned freestone peaches.

A change of 10 percent in the indicator of other supply (24 No. $2\frac{1}{2}$ basis) of canned freestone peaches, considered by itself, was on the average accompanied by a change in the opposite direction of about 0.3 percent a case in the f.o.b. price (fancy, No. $2\frac{1}{2}$) of Pacific Coast canned freestone peaches.

Differences between the actual f.o.b. prices of Pacific Coast canned freestone peaches (fancy, No. 2 $\frac{1}{2}$) and those accounted for by the statistical analysis are given in Table 17 of this report.

Data

Although the sources of the data on which this report is based are indicated in the footnotes of the various tables, the following supplementary explanations may be noted for the 1964-65 prices, movement data, and other economic information used in the analyses.

The f.o.b. prices of cling peaches, pears, freestone peaches, fruit cocktail, and apricots are industry average prices reflecting cannery operations. The f.o.b. prices for canned pears and freestone peaches reflect operations of canneries in the Pacific Northwest as well as in California. The canned pear and freestone peach prices for the Northwest were collected through the Northwest Cannery and Freezers Association and for California were collected through the Cannery League of California. The 1964-65 price data for cling peaches and fruit cocktail were collected through the Cling Peach Advisory Board, and the prices for canned apricots were collected through the Cannery League of California. The price data for Hawaiian pineapple are based on published quotations supplemented by trade information.

The data on canner stocks and movement are based on reports issued by the following agencies: for cling peaches and fruit cocktail, the Cling Peach Advisory Board; for apricots, California canned pears, and California canned freestone peaches, the Cannery League of California; and for Northwest canned pears and freestone peaches, the Northwest Cannery and Freezers Association. The movement data for canned pineapple were derived from trade sources.

The index of United States disposable personal income is based on reports issued by the U. S. Department of Commerce. The levels of competing canned fruit prices for each of the fruits are measured by indexes constructed as indicated in Tables 6, 10, 14, and 18 appended to this report. Exports are based on U. S. Department of Commerce reports, and United States government purchases are based on releases issued by the U. S. Departments of Agriculture and Defense.

1964-65	4.51	5.26	6.29	5.68	5.78	8.50

a/ Based on weighted average canners' f.o.b. sales prices (for cling peaches, apricots, pears, freestone peaches, and fruit cocktail) determined from canners' reports on their billings and invoices of sales f.o.b. cannery or dock (including brokerage, cash discount, swell, label, and case allowances but excluding any special or trade discounts and any prepaid charges included in delivery prices such as freight and marine insurance). Prices adjusted to an industry-wide common or nondifferentiated basis by modification for recognized price premium conventional for certain brands.

Sources:

Col. 1: F.o.b. prices (other than clings) in Table 1 weighted by corresponding domestic commercial shipments in Table 2.

Col. 2: Figures in column 1 expressed as percentages with 1947-48 to 1949-50 = 100.

Col. 3: Based on income data in U. S. Department of Commerce, Survey of Current Business (second quarter, 1965, estimated).

Col. 4: Figures in column 3 expressed as percentages with 1947-48 to 1949-50 = 100.

Col. 5: Column 2 as percent of column 4.

Note for Canned Cling Peaches

With price as the dependent variable and the other variables below considered as the determining variables, regression equations fitted by the method of least squares to the series covering the years 1924-25 through 1964-65 (excluding 1941-42 through 1946-47) are:

$$(1) \quad Y' = -11.4590 - \frac{0.2162(X_1)}{(5.1867)} + \frac{3.6712(\log_e X_3)}{(11.9196)} + \frac{0.0198(X_4)}{(4.3174)}; \quad R = 0.95$$

$$(2) \quad (\log_e Y)' = -8.6094 - \frac{0.2968(\log_e X_1)}{(4.2884)} + \frac{1.2004(\log_e X_3)}{(21.2847)} + \frac{1.1842(\log_e X_4)}{(12.3105)};$$

$$R = 0.98$$

$$(3) \quad Y' = -12.4291 - \frac{0.1679(X_2)}{(9.3406)} + \frac{3.7605(\log_e X_3)}{(17.5134)} + \frac{0.0226(X_4)}{(7.4860)}; \quad R = 0.98$$

$$(4) \quad (\log_e Y)' = -8.0840 - \frac{0.2880(\log_e X_2)}{(3.4533)} + \frac{1.1516(\log_e X_3)}{(18.8425)} + \frac{1.1215(\log_e X_4)}{(9.6183)};$$

$$R = 0.97$$

Y is the annual average f.o.b. price (choice, No. 2½) of California canned cling peaches (dollars per case), Table 4, column 1.

X_1 is the canners' commercial domestic movement of California canned cling peaches (in units of 1 million cases), Table 4, column 2.

X_2 is the canners' commercial movement of California canned cling peaches (in units of 1 million cases), Table 4, column 3.

X_3 is the index of United States disposable personal income (1947-48 to 1949-50 = 100), Table 4, column 4.

X_4 is the adjusted index of prices of competing canned fruits (1947-48 to 1949-50 = 100), Table 4, column 5.

The numbers in parentheses are t-ratios for the regression coefficients, and R is the coefficient of multiple correlation.

^{a/} Preliminary; subject to revision.

Sources:

- Col. 1: F.o.b. prices (other than pears) in Table 1 weighted by corresponding shipments in Table 2.
- Col. 2: Figures in column 1 expressed as percentages with 1947-48 to 1949-50 = 100.
- Col. 3: Based on income data in U. S. Department of Commerce, Survey of Current Business (second quarter, 1965, estimated).
- Col. 4: Figures in column 3 expressed as percentages with 1947-48 to 1949-50 = 100.
- Col. 5: Column 2 as percent of column 4.

Note for Canned Pears

With price as the dependent variable and the three other variables below considered as the determining variables, regression equations fitted by the method of least squares to the series covering the years 1926-27 through 1964-65 (excluding 1940-41 through 1947-48) are:

$$(1) \quad Y' = -14.4423 - \frac{0.7556(X_1)}{(7.1517)} + \frac{4.9301(\log_e X_3)}{(8.8594)} + \frac{0.0155(X_4)}{(1.9005)}; \quad R = 0.97$$

$$(2) \quad (\log_e Y)' = -8.6492 - \frac{0.3112(\log_e X_1)}{(5.4679)} + \frac{1.2770(\log_e X_3)}{(20.0529)} + \frac{1.1059(\log_e X_4)}{(9.9568);$$

$$R = 0.99$$

Y is the annual average f.o.b. price (choice, No. 2 $\frac{1}{2}$) of Pacific Coast canned pears (dollars per case), Table 8, column 1.

X₁ is the canners' commercial domestic movement of Pacific Coast canned pears (in units of 1 million cases), Table 8, column 2.

X₃ is the index of United States disposable personal income (1947-48 to 1949-50 = 100), Table 8, column 3.

X₄ is the adjusted index of prices of competing canned fruits (1947-48 to 1949-50 = 100), Table 8, column 4.

The numbers in parentheses are t-ratios for regression coefficients, and R is the coefficient of multiple correlation.

- Col. 5: Column 2 as percent of column 4.

Note for Canned Apricots

With price as the dependent variable and the three other variables below considered as the determining variables, regression equations fitted by the method of least squares to the series covering the years 1924-25 through 1964-65 (excluding 1941-42 through 1946-47) are:

$$(1) \quad Y' = -6.6422 - 0.5908(X_1) + 2.6478(\log_e X_3) + 0.0129(X_4); R = 0.93$$

(4.1521) (8.9057) (2.9730)

$$(2) \quad (\log_e Y)' = -5.2749 - 0.2610(\log_e X_1) + 0.8302(\log_e X_3) + 0.7396(\log_e X_4);$$

(4.3088) (13.5701) (7.7262)

$$R = 0.96$$

Y is the annual average f.o.b. price (choice, No. 2 $\frac{1}{2}$) of California canned apricots (dollars per case), Table 12, column 1.

X_1 is the canners' commercial domestic movement of California canned apricots (in units of 1 million cases), Table 12, column 2.

X_3 is the index of United States disposable personal income (1947-48 to 1949-50 = 100), Table 12, column 3.

X_4 is the adjusted index of prices of competing canned fruits (1947-48 to 1949-50 = 100), Table 12, column 4.

The numbers in parentheses are t-ratios for regression coefficients, and R is the coefficient of multiple correlation.

TABLE 15--continued.

a/ Preliminary; subject to revision.

b/ No exports of canned freestone peaches are reflected; exports of all canned peaches are considered as clings, since no breakdown between exports of clings and frees is available.

c/ For the prewar years, the only Northwest data available are packs (in actual cases), and they are combined with California data (24 No. 2½ basis) to derive estimated Pacific Coast data. For the postwar years, however, Pacific Coast reflects combined data (24 No. 2½ basis) on packs and canners' stocks for California and the Northwest.

Sources: Canners League of California, Northwest Canners and Freezers Association, and U. S. Departments of Agriculture and Defense.

- Col. 5: Column 2 as percent of column 4.

Note for Canned Freestone Peaches

With price as the dependent variable and the other variables below considered as the determining variables, regression equations fitted by the method of least squares to the series covering the years 1934-35 through 1964-65 (excluding 1941-42 through 1946-47) are:

$$(1) \quad Y' = -18.2570 - \frac{0.9185(X_1)}{(5.0284)} + \frac{5.2793(\log_e X_3)}{(7.2986)} + \frac{0.0252(X_4)}{(2.1776)} - \frac{0.1948(X_5)}{(0.7919)};$$

$$R = 0.94$$

$$(2) \quad (\log_e Y)' = -10.1509 - \frac{0.0519(\log_e X_1)}{(1.2505)} + \frac{1.2394(\log_e X_3)}{(14.8300)} + \frac{1.3663(\log_e X_4)}{(12.5086)} - \frac{0.0281(\log_e X_5)}{(2.2215)}; R = 0.98$$

Y is the annual average f.o.b. price (fancy, No. 2½) of Pacific Coast canned freestone peaches (dollars per case), Table 16, column 1.

X₁ is the canners' commercial domestic movement of Pacific Coast canned freestone peaches (in units of 1 million cases), Table 16, column 2.

X₃ is the index of United States disposable personal income (1947-48 to 1949-50 = 100), Table 16, column 3.

X₄ is the adjusted index of prices of competing canned fruits (1947-48 to 1949-50 = 100), Table 16, column 4.

X₅ is the pack of freestone peaches in other states (in units of 1 million cases), Table 16, column 5.

The numbers in parentheses are t-ratios for regression coefficients, and R is the coefficient of multiple correlation.

<u>Netherlands</u>					
United States	3.85			4.64	4.87

a/ Blanks indicate no quotation cited.

b/ There is reason to believe that changes in description have been made to place "fancy" grade as marketed by Australia and South Africa in London nearer to the United States "choice" grade than is the grade labeled "choice" by these two countries. These price quotations are:

	July, 1964	October, 1964	January, 1965	April, 1965
\$ per dozen units of No. 2 $\frac{1}{2}$				
<u>Australia</u>				
Peaches, halves, fancy	3.54	3.46	3.41	3.41
Pears, halves, fancy	3.68	3.57	3.55	3.55
<u>South Africa</u>				
Apricots, halves, fancy	3.22	3.26		
Peaches, halves, fancy	3.26	3.22	3.27	3.31
Pears, halves, fancy	3.46	3.50	3.55	3.52

c/ June, 1964; not July.

d/ Choice; not fancy. Philippines quote "fancy" at: January, 1965, \$4.17; April, 1965, \$4.26.

e/ Choice; not fancy.
